PRODUCT DATASHEET
SIEMENS 6SE7090-0XX84-0FF5

Product: Siemens SIMOVERT MASTERDRIVES Control Unit
Model: 6SE7090-0XX84-0FF5

General Description:
The Siemens 6SE7090-0XX84-0FF5 is a control module used in SIMOVERT MASTERDRIVES series for variable frequency drive (VFD) applications. It is designed for industrial motor control with high precision and reliability.

Key Specifications:
- Series: SIMOVERT MASTERDRIVES
- Type: Control Unit / Control Board
- Application: AC Drive / Motor Control
- Communication: Supports industrial communication modules
- Mounting: Panel mounted within drive system
- Compatibility: Used with Siemens MASTERDRIVES systems

Electrical Details:
- Supply Voltage: As per drive system configuration
- Frequency Range: Depends on connected drive
- Control Interface: Digital & Analog inputs/outputs

Features:
- High-performance motor control
- Reliable industrial-grade design
- Easy integration with Siemens drive systems
- Modular design for maintenance

Applications:
- Industrial automation
- Manufacturing plants
- Conveyor systems
- Heavy machinery control

Manufacturer: Siemens
