Subject Light Duty Plug Fuse Switches Phase Out

To Whom It May Concern,

This is a notice that Siemens will be phasing out all the Light Duty Plug Fuse Switches over the next 4 months. Substitutes that are similar to the phased-out products are provided below. These replacements will have a cartridge fuse instead of the plug fuse.

Production of these disconnects will come to an end this spring/summer. During the remaining production time, Siemens plans to produce and hold enough inventory to support our customer that require time to transition to the current substitutes. Please coordinate with your local salesperson regarding the phase out / conversion to ensure that Siemens will produce and hold enough inventory to support your needs.

The ground kit, GSGK60 will be replaced with the already existing, exact same ground kit HG61234. This is a consolidation of two identical accessories with different catalog numbers to one catalog number.

W410190 is a neutral that only applicable to the plug fuse switches and will be included with the phase out.
